ロジスティック写像 カオス2　　Revised jan 8, 2017

離散型ロジスティック方程式

$$f(x)=3.839x(1-x)$$

漸化式　X n= 4 * Xn * (1-Xn)、　　0.01 < x < 4　Xn としてコンピュータで計算する。
パラメーターである4を、3.839に変えた漸化式にすると、Xの挙動はカオス的になる

```
#include <stdio.h>

//FILE *w_file1;
//const char FILENAME1[]="xfile.txt";

float recursion(float Xn);

//int main(int argc, const char * argv[])
int main ()
{
   //w_file1=fopen(FILENAME1,"a");

   float Xn=0.01;

   for(int n=0;n<1001;n++)
   {
      printf("%f, ",recursion(Xn));

      //fprintf(w_file1,"%f\t",recursion(Xn));

      Xn=recursion(Xn);
   }
   // fclose(w_file1);
   return 0;
}

float recursion(float Xn)
{
   return(4*Xn*(1-Xn));  /* 4を3.839nに変えた漸化式にすると、カオスが現れる*/
}
```

計算結果1;

f(x) = x であれば、点x はf の不動点という

f^n(x) = x であれば、点x の周期点という

我々が出会うたいていの力学系は、孤立した周期点を持つ
