## The second good news

Today's afternoon, a parent whose kid used to participate my math and programming class these days brought me an interesting piece of news. Her boy is a finalist of Junior math Olympia as same as a gift boy who won a finals month before last. please recall my blog posted on Aug20. I got her to send me pictures of the awards ceremony. It makes me really happy to see boys smile in joy with a finalist certificate.

Further more, I was asked by mothers, and wanted me to organize a math and programming classroom again. Unfortunately, almost persons in charge of seminar are not interested math and do not understand the importance of algorithmic education for kids even in the science museum that provides the opportunity of junior science corse. i.e., mathematical science has low priority among ordinary scientists. In such peer pressure, the number of times to hold courses has decreased. Therefore, I have to make an extra efforts to respond to science kids and their parent's request.
